WHM11-2830AE
0.9- 1.3 GHz LOW NOISE WIDE BAND AMPLIFIER

Key Features

- 0.9 ~ 1.3 GHz
- 0.8 dB Noise Figure
- 10.0 dBm Max CW P_{IN}
- 30.0 dBm Output IP_3
- 28.0 dB Gain
- 19.0 dBm P_{1dB}
- 1.35:1 VSWR Fully Matched
- Unconditional Stable, k>1
- Single Power Supply
- >68 Years MTBF
- RoHS Compliant
- MSL-1 Moisture Sensitivity Level

Product Description

WHM11-2830AE is integrated with WanTcom proprietary low noise amplifier technologies, high frequency micro electronic assembly techniques, and high reliability designs to realize optimum low noise figure, wideband, and high performances together. With single +5.0V DC operation, the amplifier has optimal input and output matching in the specified frequency range at 50-Ohm impedance system. The amplifier has standard 0.50" x 0.35" x 0.08" surface mount package.

The amplifier is designed to meet the rugged standard of MIL-STD-883g.

Applications

- GPS Infrastructures
- Hand held GPS
- Defense
- Security System
- Measurement
- Fixed Wireless

Specifications

Summary of the key electrical specifications at room temperature

Index	Testing Item	Symbol	Test Constraints	Min	Nom	Max	Unit
1	Gain	S_{21}	0.9 - 1.3 GHz		28	29	dB
2	Gain Variation	ΔG	0.9 - 1.3 GHz		+/-0.5	+/-1.0	dB
3	Input VSWR	SWR_1	0.9 - 1.3 GHz	14	18		Ratio
4	Output VSWR	SWR_2	0.9 - 1.3 GHz	14	18		Ratio
5	Reverse Isolation	S_{12}	0.9 - 1.3 GHz	40	45		dB
6	Noise Figure	NF	0.9 - 1.3 GHz		0.8	1.0	dB
7	Output 1dB Gain Compression Point	P_{1dB}	0.9 - 1.3 GHz	16	19		dBm
8	Output-Third-Order Interception Point	IP_3	Two-Tone, P_{out} = 0 dBm each, 1 MHz separation		30		dBm
9	Current Consumption	I_{dd}	V_{dd}= +5.0 V		85		mA
10	Power Supply Operating Voltage	V_{dd}		+4.7	+5.0	+5.3	V
11	Thermal Resistance[1]	$R_{th,c}$	Junction to case			150	^{o}C/W
12	Operating Temperature	T_o		-40		+85	^{o}C
13	Maximum Input CW RF Power	$P_{IN, MAX}$	DC – 6.0 GHz			10	dBm

Absolute Maximum Ratings

Parameters	Units	Ratings
DC Power Supply Voltage	V	7.0
Drain Current	mA	150
Total Power Dissipation	mW	600
Input CW RF Power	dBm	10
Channel Temperature	°C	150
Storage Temperature	°C	-55 ~ 125
Operating Temperature	°C	-40 ~ +85

Operation of this device beyond any one of these parameters may cause permanent damage.

Functional Block Diagram
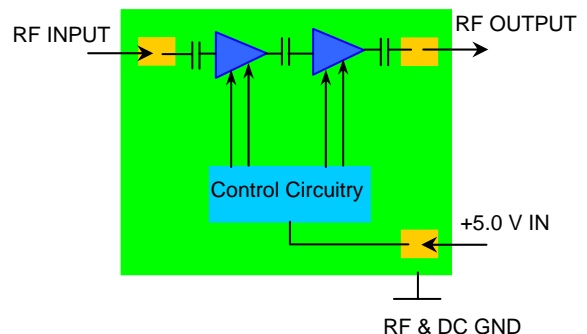

Ordering Information

Model Number	WHM11-2830AE

ESD tube is used for the packing. Contact factory for tape and reel packing option for higher volume order.

Application Notes:

A. Motherboard Layout

The recommended motherboard layout is shown in diagram of **Foot Print/Mounting Layout**. Sufficient numbers of ground vias on center ground pad are essential for the RF grounding. The width of the 50-Ohm microstrip lines at the input and output RF ports may be different for different property of the substrate. The ground plane on the backside of the substrate is needed to connect the center ground pad through the vias. The ground plane is also essential for the 50-Ohm microstrip line launches at the input and output ports.

The +5V DC voltage is applied at Pin V_{dd}. There is a built-in 0.33 UF de-coupling capacitor and no external capacitor is required. For +5V line trace length being longer than 6 inches without a decoupling capacitor, a 0.33 uF de-coupling capacitor, C_1, with minimum rating voltage of 10V is needed across the +5V pin to ground. The capacitor must be rated in the temperature range of -55 ^{0}C to 100 ^{0}C to ensure the entire circuit work in the specified temperature range.

No DC block capacitor is required at input and output RF ports. The NC pins connecting to ground are recommended.

Fig. 2 Dispensed solder paste

Fig. 3 Assembled part

B. Assembly

The regular low temperature and none clean solder paste such as Sn63Pb37 is recommended. The high temperature solder has been used internally for the WHM series amplifier assembly. The melting temperature point of the high temperature solder is around 230 ^{0}C. Thus, melting temperature of the external assembly solder paste should be below 220 ^{0}C for assembling WHM series amplifier on the test board to reduce the possible damage. The temperature melting point of the Sn63Pb37 solder paste is around 183 ^{0}C and is suitable for the assembly purpose. Sn60Bi40 low temperature solder paste is required for the assembly if the RoHS compliance is needed. Regular SAC305 solder paste and its reflow will damage the amplifier.

The solder paste can be dispensed by a needle manually or driven by a compressed air. **Figure 2** shows the example of the dispensed solder paste pattern. Each solder paste dot is in the diameter of 0.005" ~ 0.010" (0.125 ~ 0.250 mm).

For volume assembly, a stencil with 0.004" (0.10 mm) is recommended to print the solder paste on the circuit board.

For more detail assembly process, refer to AN-109 at www.wantcominc.com website.

C. Electrical Testing and Fine Tuning

The amplifier is designed to be fully matched at the input and output ports. Any tuning is not needed. However, when connecting the assembled amplifier to a device such as a SMA connector or a filter, the connecting point or joint point could affect mainly the return loss at the port due to the non-ideal 50-Ohm impedance of the device. By varying the connection feature size such as the solder amount to get the optimum return loss or best matching result at the interface. This fine-tuning has little affect on the other performance such as gain, noise figure, P_{1dB}, or IP_3.

During the fine-tuning process, a vector network analyzer can be used to monitoring the return loss at the port while varying the feature size of the joint point. Varying the connection feature size until the optimum return loss is achieved.
